PROJEK SARJANA MUDA 1: PROPOSAL FORM

A TITLE OF PROPOSED PROJECT | TAJUK PROJEK YANG DICADANGKAN

An Investigation into Enhancing Engagement and Progression in Fishing Adventure Games through Dynamic Environments and Exploration Mechanics

B DETAILS OF STUDENT | BUTIRAN PELAJAR

Name	MUHAMMAD ADLIHAQ BIN MOHD ASMADI			Program:	BITC ☐	BITD ☐	BITI ☐
Matric No.	B032210163				BITE ☒	BITM ☐	
Handphone No.	011-33901482				BITS ☐	BITZ ☐	
Semester	6	Session	2025	Email Address	B032210163@student.utem.edu.my		

C PROJECT INFORMATION | MAKLUMAT PROJEK

(i) Executive Summary of Project Proposal [Maximum 300 words]

Fishing games have long been popular among casual and simulation players, offering a calming, rewarding experience. However, many existing titles prioritize realism at the expense of engaging progression systems, resulting in repetitive gameplay that lacks long-term appeal. Legends of the Deep seeks to address this limitation by combining traditional fishing mechanics with exploration and narrative-driven progression, creating a more immersive and rewarding player experience.

This project introduces a dynamic fishing system where fish behavior is influenced by environmental factors such as time of day, weather conditions, and geographic location. Players will progress through an integrated upgrade system, using an in-game economy to enhance equipment and unlock new fishing regions. Additionally, the game world will feature visually immersive environments, realistic water physics, and interactive elements that encourage discovery.

The objective of this project is to develop a fully playable fishing adventure game for PC and mobile platforms using Unreal Engine. The final product will demonstrate advanced game design principles, combining engaging mechanics with an exploration-driven progression system. This work aims to contribute to the fishing game genre by providing a balanced blend of relaxation and adventure, showcasing technical proficiency and creative game design innovation.

(ii)	Detailed Proposal of the Project
	(a) Introduction (<i>Project Background and Problem Statements</i>)
	Fishing games have been popular for their relaxing gameplay, allowing players to enjoy the experience of catching fish in virtual environments. However, many existing fishing games lack depth, often becoming repetitive due to limited progression and interaction. Players seek more engaging experiences that offer a sense of achievement, exploration, and discovery. The main problem with traditional fishing games is the lack of variety and meaningful progression. Many games focus only on the fishing mechanics without adding an adventure or upgrade system to keep players engaged. This can lead to a loss of interest over time, as there is little motivation to continue playing beyond catching fish. <i>Legends of the Deep</i> aims to solve this by introducing a fishing adventure game with an engaging progression system, dynamic environments, and hidden secrets. Players will be able to explore different fishing locations, encounter rare fish, and upgrade their gear, making the experience more rewarding and immersive. This project will provide a unique blend of relaxation and adventure, appealing to both casual and dedicated players.
	(b) Objectives of the Project
	□ <i>To study player engagement and the factors contributing to the longevity of fishing adventure games, focusing on progression systems and exploration mechanics.</i> □ <i>To study player engagement and the factors contributing to the longevity of fishing adventure games, focusing on progression systems and exploration mechanics..</i> □ <i>To evaluate player experience and gameplay effectiveness through user testing, focusing on immersion, progression satisfaction, and replayability.</i>
	(c) Scope of the Project
□ Target Audience – The game is designed for casual gamers and simulation enthusiasts who enjoy relaxing yet engaging gameplay. It appeals to players looking for a stress-free gaming experience with elements of adventure and exploration. □ Platform – The game will be developed for PC and Mobile, ensuring accessibility and optimal performance while utilizing Unreal Engine’s graphical and physics capabilities. □ Genre – <i>Legends of the Deep</i> falls under the adventure and simulation genres, offering a mix of fishing mechanics, exploration, and progression-based gameplay. □ Theme – The game features a nature-inspired theme, focusing on peaceful fishing environments while integrating elements of mystery and discovery through hidden fishing spots, rare fish, and side quests.	
(d) Expected Outcome/ Proposed Solution	
The expected outcome of this project is a fully functional PC and Mobile fishing adventure game, <i>Legends of the Deep</i>, developed using Unreal Engine. The game will offer a relaxing yet engaging fishing experience with a structured progression system, immersive visuals, and exploration elements.
