

MUHAMMAD ADLIHAQ BIN MOHD ASMADI

Cadangan Tajuk: An Investigation into Enhancing Engagement and Progression in Fishing Adventure Games through Dynamic Environments and Exploration Mechanics

✅ **Kandungan Project:**

Kandungan projek ini menarik kerana ia menggabungkan elemen santai dan pengembaraan. Namun, projek ini boleh ditambah baik dengan memperkenalkan lebih banyak elemen interaksi, seperti sistem cerita pendek atau NPC (non-playable characters) yang memberi misi sampingan untuk menambah variasi gameplay.

✅ **Skop Project:**

Skop platform PC dan Mobile sangat baik untuk capaian lebih luas. Walau bagaimanapun, cabaran optimisasi mungkin muncul kerana Unreal Engine lebih berat untuk peranti mobile. Boleh dipertimbangkan versi grafik yang lebih ringan untuk mobile.

✅ **Objective Project:**

Objektif projek cukup jelas dan realistik. Mungkin boleh ditambah satu objektif untuk "menganalisis pengalaman pengguna" selepas prototaip dibina bagi memastikan gameplay tidak terlalu berulang.

NILAI TAMBAH

✅ **Kandungan Project:**

Projek ni dah ada konsep asas yang kukuh — gabungan santai dan pengembaraan. Tapi untuk tambah "wow factor", boleh masukkan elemen "**discovery**" lebih mendalam, contoh:

- **"Rare Legendary Fish"** — Setiap kawasan ada ikan legenda tersendiri yang hanya muncul dalam cuaca atau waktu tertentu. Ini bagi pemain sebab untuk terus explore.
- **Side Quest** — NPC di jeti boleh beri misi, contohnya cari barang hanyut untuk dapatkan upgrade eksklusif.
- **Seasonal Event** — Ikan khas yang hanya muncul pada musim tertentu dalam dunia game (misalnya ribut laut, air pasang, dsb.).

👉 **Cadangan nilai tambah:**

Bagi elak gameplay cepat bosan, boleh wujudkan "**Environmental Hazards**" — ombak kuat, perahu rosak, atau gangguan seperti burung laut curi hasil tangkapan. Tapi ini dikawal sederhana agar development masih sempat siap.

ADJUSTED OBJECTIVES

1. **To study** player engagement and the factors contributing to the longevity of fishing adventure games, focusing on progression systems and exploration mechanics.

2. **To develop** an interactive fishing adventure game with dynamic environments, weather-based fish appearances, and an in-game economy for gear upgrades.

3. **To evaluate** player experience and gameplay effectiveness through user testing, focusing on immersion, progression satisfaction, and replayability.

Suggestion Executive Summary:

Fishing games have long been popular among casual and simulation players, offering a calming, rewarding experience. However, many existing titles prioritize realism at the expense of engaging progression systems, resulting in repetitive gameplay that lacks long-term appeal. *Legends of the Deep* seeks to address this limitation by combining traditional fishing mechanics with exploration and narrative-driven progression, creating a more immersive and rewarding player experience.

This project introduces a dynamic fishing system where fish behavior is influenced by environmental factors such as time of day, weather conditions, and geographic location. Players will progress through an integrated upgrade system, using an in-game economy to enhance equipment and unlock new fishing regions. Additionally, the game world will feature visually immersive environments, realistic water physics, and interactive elements that encourage discovery.

The objective of this project is to develop a fully playable fishing adventure game for PC and mobile platforms using Unreal Engine. The final product will demonstrate advanced game design principles, combining engaging mechanics with an exploration-driven progression system. This work aims to contribute to the fishing game genre by providing a balanced blend of relaxation and adventure, showcasing technical proficiency and creative game design innovation.
